16. Abstract

Full year 1978 daily aircraft operations were obtained from 429 towered airports, 427 of which are operated by the Federal Aviation Administration (FAA).

The purpose of this report was to use a package of computer programs to perform statistical analyses on six user types of daily operations as reported on FAA Form 7230-1, Airport Traffic Record. The output of the computer programs displays specific statistics in tabular and graphical format. The tabular statistics include means, standard deviations and peak occurrences computed for individual airports as well as various multiple airport groupings. Frequency distribution histograms and time curves are presented in a graphical format for the entire nationwide set of FAA towered airports.

FOREWORD

Full year 1978 daily aircraft operations were obtained from 429 towered airports (427 operated by the Federal Aviation Administration (FAA)). Six different types of daily operations were reported by these airports on the FAA Form 7230-1, Airport Traffic Record:

(1) Air Carrier - Itinerant

(2) Air Taxi - Itinerant

(3) General Aviation - Itinerant

(4) Military - Itinerant

(5) General Aviation (Civil) - Local

(6) Military - Local

The material used in this handbook was developed by Advanced Technology, Inc. (ADTECH) under Contract No. DOT-FA78WA-4151. The main objectives of this contract were to further develop a package of computer programs to perform on-line computer statistical analyses on the daily tower data and to prepare the material used in this report. The report provides a convenient public document for summary reference and the data it contains are used by planning personnel in the FAA, other government units, and external sources for airport studies that require such background information for forecasting capacity, and environmental analyses. Within the FAA, the computerized daily tower activity statistics are utilized as basic input for forecast models, airport planning, and for facility planning of the air traffic control system.

For this report, the output of the computer programs displays specific statistics in tabular and graphical format. The tabular statistics include means, standard deviations, and peak occurrences computed for individual airports as well as various multiple airport groupings. Frequency distribution histograms and time curves are presented in a graphical format for the entire nationwide set of airports.

Two FAA towered airports commissioned during the year 1978 were not included in this report because a full year of activity information was not available. These airports were:

	Airport	State	Month Commissioned in 1978
(1)	Forbes Field	Kansas	May
(2)	Hoolehua	Hawaii	July

Martha's Vineyard, Massachusetts is included in the 429 towered airports, however, it is a seasonally operated tower. The two non-FAA towered airports included were Falmouth, Massachusetts and Suffolk County, New York. Data for Falmouth was not received for December 1978, so, December 1977 data was used in its place.

A complete list of the 429 airports included in this report is presented in an Airport Location Directory beginning on page v.

1/ The airports are identified as being in top 50 on the basis of total operations in CY 1978.

2/ Air traffic hubs are not airports; they are the cities and Standard Metropolitan Statistical Areas (SMSAs) requiring aviation services. Individual communities fall into four hub classes as determined by each community's percentage of the total enplaned revenue passengers in all services and all operations of U.S. certificated route air carriers in the 50 states, the District of Columbia, and other U.S. area desig-ated by the FAA. Classifications in this publications, based on 222,589,589 enplanements for the 12 months ending December 31,1978 , are:

Hub Classification	Percent of Total Enplaned Passengers	Number of Enplaned Passengers
Large (L)	1.00 or more	2,225,896 or more
Medium (M)	0.25 to 0.99	556,474 to 2,225,895
Small (S)	0.05 to 0.24	111,295 to 556,473
Nonhub (N)	less than 0.05	less than 111,295

SECTION I

SINGLE AIRPORT ACTIVITY STATISTICS

For each of the nine categories of operations for the 429 airports basic descriptive statistics were computed. These were: means, standard deviations, and peaks for daily, weekly, and monthly operations at each airport. Along with these statistics, quarterly and annual totals were also computed. The numerical values were all rounded off to the nearest integer and the special symbol "*" where shown, indicates that peak to average ratios would not be meaningful and were not computed.

SECTION II

AVERAGE AIRPORT ACTIVITY STATISTICS

The data incorporated in the single airport activity statistics formed the data base needed to compute average statistics for various groupings of airports. Similar descriptive statistics were computed for groups of airports as were computed for single airports. Instead of quarterly and annual totals, quarterly and annual means and standard deviations were computed. The peak airports were identified for daily, weekly, and monthly operations.

The composition of 71[1]/ specific groupings of airports presented in the CY 1978 Tower Airport Statistics Handbook is as follows:

(1) USA (429 airports)

(2) REGIONS (11 categories of 429 airports)

(3) STATES (50 states; 3 territories--Puerto Rico, Wake Island, and Virgin Islands, District of Columbia)[1]/

(4) Top 50 airports (most operations)

(5) Large HUB airports (91 airports)

(6) Medium HUB airports (58 airports)

(7) Small HUB airports (105 airports)

(8) Non-HUB airports (175 airports)

PRECEDING PAGE BLANK

1/ For airport groups listed below, Average Airport Activity Statistics does not meaningfully apply because these groups contain only one airport. Tables for these "groups" were deleted from Section II. The reader can refer to Section I for the related statistics.

Airport Groups	Section II Table Numbers Deleted	Section I Table Number Reference
District of Columbia	2-20	1-76
Delaware	2-21	1-24
Rhode Island	2-53	1-22
Vermont	2-61	1-23

SECTION III

AVERAGE DAILY OPERATIONS

The average daily operations reflect averages and standard deviations for each day of the week for the 429 airports. These statistics were computed for all the nine categories of operations. However, only general aviation itinerant and local activity are given in SECTION III along with daily average for total operations. Other categories are available on request. Each airport in Tables 3-3, 3-6, and 3-9 is identified by its region, state, location, and the airport location identifier code.

FREQUENCY DISTRIBUTION HISTOGRAMS

The frequency distribution histograms are presented for total daily operations by day of week for the 429 airports. Each histogram identifies the average as well as the standard deviation for the day under consideration. In addition, the number of airports in a specific interval is also printed.
